	Lesson: NATURE: The Brook by Alfred Tennyson (Poem)
	Listening: Answering a series of questions about main ideas and supporting ideas after
	listening to audio texts.
	Speaking: Discussion in pairs/small groups on specific topics followed by formal, struc-
TINITE II	
UNIT-II	tured short talks/presentations.
(10 Hrs)	Reading: Identifying sequence of ideas; recognizing verbal techniques that help to link
	the ideas in a paragraph together.
	Writing: Structure of a paragraph - Paragraph writing (specific topics)
	Grammar: Cohesive devices - linkers, use of articles and zero article; prepositions.
	Vocabulary: Homonyms, Homophones, Homographs.
	Lesson: BIOGRAPHY: Elon Musk
	Listening: Listening for global comprehension and summarizing the texts.
	Speaking: Discussing specific topics in pairs or small groups and reporting what is dis-
	cussed.
UNIT-III	Reading: Reading the texts in detail by making basic inferences-recognizing and inter-
(10 Hrs)	
(10 1113)	preting specific context-specific clues; strategies to use textual signs for comprehension.
	Writing: Summarizing, Note-making, Paraphrasing
	Grammar: Verbs-tenses; subject-verb agreement; Compounding, Collocational possibil-
	ity.
	Vocabulary: Words often confused, Jargons
	Lesson: INSPIRATION: The Toys of Peace by Saki
	Listening: Making predictions while listening to conversations/ transactional dialogues
	with and without audio/video.
	Speaking: Role plays for practice in functional and academic contexts -asking for and
	giving information/directions.
UNIT-IV	Reading: Studying the importance of graphical representation - information transfer in
(10 Hrs)	texts to convey information, reveal trends/patterns/relationships, communicate processes
	or display complicated data.
	Writing: Significance and types of Letter Writing: Official Letters, Resume writing.
	Grammar: Reporting verbs, Direct & Indirect speech, Active & Passive Voice
	Vocabulary: Compound words, Collocations.
	A MORNATION OF D. C.
	Lesson: MOTIVATION: The Power of Intrapersonal Communication (An Essay)
	Listening: Identifying key terms, understanding concepts and answering a series of rele-
	vant questions that test comprehension from audio/video resources.
UNIT-V	Speaking: Formal oral presentations on topics from academic contexts
	Reading: Reading comprehension.
(10 Hrs)	Writing: Writing structured essays on specific topics.
	Grammar: Editing short texts–identifying and correcting common errors in grammar and
	usage (articles, prepositions, tenses, subject verb agreement, punctuation)
	Vocabulary: Technical Jargons
İ	1 . January 1 . Taniman and 200

ENGINEERING CHEMISTRY

(For CE & ME)

Course Objectives:

- 1. Familiarize the students with different application-oriented topics like new generation engineering materials, storage devices, different instrumental methods etc
- 2. Impart a scientific approach and to familiarize the applications of chemistry in the field of technology
- 3. Encourage the students to learn about the chemical composition and properties of the various materials for societal applications

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge Level
1.	Apply the knowledge of electrochemistry principles to design energy storage devices and understanding the principle, mechanism of corrosion and utilization of various techniques to control corrosion.	К3
2.	Apply the knowledge about quality of water and its treatment methods for domestic and industrial applications. Analyze the water quality parameters by different chemical analytical methods	К3
3.	Design and construct engineering products like refractories, composites, building materials for societal applications. Also, can apply the knowledge of lubrication	К3
4.	Develop polymer composites, synthetic polymers and formulation of polymers and their use in design for sustainable development. Develop the analytical knowledge of fuels and their economics, advantages, and limitations	K4
5.	Develop the knowledge of nanomaterials and colloids for societal application and develop the ability to manufacture nanomaterials by chemical and environmental benign methods	K3

SYLLABUS

Electrochemistry and Applications

UNIT-I (10Hrs)

Electrodes – electrode potential, determination of electrode potential by calomel electrode, electrochemical cell, Primary cells – Zinc-air battery, Secondary cells – lithium-ion batteries- working principle of the batteries including cell reactions; Fuel cells-Basic Concepts, the principle and working of hydrogen-oxygen fuel cell- Polymer Electrolyte Membrane Fuel cells (PEMFC).

Corrosion: Introduction to corrosion, metal oxide formation by dry corrosion, Pilling Bedworth ratios and uses, electrochemical theory of corrosion, galvanic corrosion, differential aeration cell corrosion, Factors affecting the corrosion, cathodic protection- sacrifi-

	cial anodic method-impressed current cathodic protection method- and anodic protection
	galvanizing, tinning, and electroplating of copper and silver.
	Water Technology
UNIT-II (10 Hrs)	Soft and hardwater, Estimation of hardness of water by EDTA Method, Estimation of dissolved Oxygen by winkler's method- Boiler troubles –Priming, foaming, scale and sludge Caustic embrittlement, Water softening methods-Ion-exchange processes - desalination of brackish water, reverse osmosis (RO) and electrodialysis, Drinking water treatment - Specifications for drinking water by Bureau of Indian Standards (BIS) and World health organization(WHO) standards.
	Modern Engineering Materials
	Composites- Definition, Constituents, Classification- Particle and Fiber reinforced composites, properties, and Engineering applications. Refractories- Classification, Properties, and Applications.
UNIT-III (10 Hrs)	Lubricants- Classification, Functions of lubricants, Mechanism of lubrication (thick film thin film and extreme pressure), Properties of lubricating oils – Viscosity, Viscosity Index Flash point, Fire point, Cloud point, saponification. Building materials- Portland Cement, manufacturing of Portland cement by wet process
	Setting and Hardening of cement.
	Polymers and Fuel Chemistry
UNIT-IV (10 Hrs)	Introduction to polymers, Mechanism of chain growth (free radical addition polymerization), Thermoplastics and Thermo-setting plastics-: Differences between Thermoplastics and Thermo-setting plastics, Preparation, properties and applications of poly styrene. PVC Ny lon 6,6 and Bakelite. Elastomers – Preparation, properties and applications of Buna S, Buna N. Fuels – Types of fuels, calorific value of fuels (Gross calorific value& Net calorific value) Analysis of coal (Proximate and Ultimate analysis), Liquid Fuels, refining of petroleum Octane and Cetane number- alternative fuels-preparation and applications of ethanol and bio fuel-bio diesel as fuels.
UNIT-V (10 Hrs)	Surface Chemistry and Nanomaterials Introduction to surface chemistry, colloids, synthesis of colloids (Braggs Method), nanometals and nanometal oxides, preparation -sol-gel method, chemical precipitation method and biological method (plant material derived synthesis), stabilization of colloids and nanomaterials by stabilizing agents, applications—catalysis, medicine, sensors, etc (Any-five applications).

Estd. 1980

BASIC CIVIL AND MECHANICAL ENGINEERING (Common to AIDS, AIML, CE, CSBS, CSG, CIC & ME) PART A: BASIC CIVIL ENGINEERING Course Objectives: 1. Get familiarized with the scope and importance of Civil Engineering sub-divisions 2. Introduction to basic civil engineering materials and construction techniques. 3. Introduce the preliminary concepts of surveying. 4. Acquire preliminary knowledge on Transportation and its importance in nation's economy. 5. Get familiarized with the importance of quality, conveyance and storage of water. Course Outcomes: At the end of the course students will be able to S.No Outcome Identify various sub-divisions within Civil Engineering, recognize their contributions to society, and utilize their understanding of the fundamental properties and attributes of Civil Engineering Materials to experiment with and apply prefabricated technology Apply their understanding of the fundamental concepts of surveying by effectively utilizing the knowledge of measuring distances, angles, and levels as integral components in the surveying process Identify the significance of Transportation in a nation's economy, recognize the engineering measures associated with it, and appreciate the importance of Water Storage and Conveyance Structures, fostering an understanding of social responsibilities related to water conservation Basics of Civil Engineering: Role of Civil Engineers in Society- Various Disciplines Civil Engineering - Hydraulics and Water Resources Engineering - Environmental Engineerin (Serve Comment - Aggregate - Bricks- Cement concrete- Steel. Introduction to Prefabricated co struction Techniques. Surveying: Objectives of Surveying- Horizontal Measurements- Angular Measurement Introduction to Bearings Levelling instruments used for levelling -Simple problems of levelling and bearings-Contour mapping. 	SYLLABUS									
	Introduction to Mechanical Engineering: Role of Mechanical Engineering in Industries									
	and Society- Technologies in different sectors such as Energy Manufacturing Automo-									
UNI	tive, Aerospace, and Marine sectors.									
(8 H	Engineering Materials - Metals-Ferrous and Non-ferrous, Ceramics, Composites, Smart									
	materials.									
	Manufacturing Processes: Principles of Casting, Forming, joining processes, Machining,									
	Introduction to CNC machines 3D printing and Smart manufacturing									
UNI	Thermal Engineering – Working principle of Cochran and Babcock & Wilcox Boilers									
(8 H	Working of basic principle of domestic refrigerator and air-conditioner, IC engines classi-									
	fication-2-Stroke, 4-Stroke, SI/CI Engines, Introduction to Hybrid and Electric Vehicles.									
	·									
	Power plants – Working principle of Steam, Diesel, Nuclear power plants.									
UNI	Γ-III Mechanical Power Transmission - Belt Drives, Chain, Rope drives, Gear Drives and									
(8 H	(Irs) their applications.									
	Introduction to Robotics - Joints & links and applications of robotics.									
,	: The course covers only the basic principles of Civil and Mechanical Engineering systems. The									
evalua	ation shall be intended to test only the fundamentals of the course)

		rdware & So			-		amta : C	OII on 12 C	ations D		
	Task 1: Identify the peripherals of a computer, components in a CPU and its functions. Draw										
	the block diagram of the CPU along with the configuration of each peripheral and submit t your instructor.										
			lent shou	ıld disass	semble an	d assemb	le the PC h	ack to worki	ng condition.		
1.		•							its need to go		
, , , , , , , , , , , , , , , , , , ,									d be given as		
	_	the course co		•	•		C		<u> </u>		
3 Ta	ask 3	: Every stude	ent shoul	d individ	lually inst	all MS w	indows on t	he personal c	omputer. Lab		
in		tor should ve									
		=				_		-	ald have win-		
			=		_				oth Windows		
ar	d Lir	nux. Lab insti	ructors sl	nould ver	ify the ins	tallation	and follow	t up with a V	iva		

5	Task 5: Every student should install BOSS on the computer. The system should be configured as dual boot (VMWare) with both Windows and BOSS. Lab instructors should verify the installation and follow it up with a Viva
	Internet & World Wide Web
6	Task 1: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate, to the instructor, how to access the websites and email. If there is no internet connectivity preparations need to be made by the instructors to simulate the WWW on the LAN.
	Task 2: Web Browsers, Surfing the Web: Students customize their web browsers with the
7	LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.
8	Task 3: Search Engines & Netiquette: Students should know what search engines are and how to use the search engines. A few topics would be given to the students for which they need to search on Google. This should be demonstrated to the instructors by the student.
9	Task 4: Cyber Hygiene: Students would be exposed to the various threats on the internet and would be asked to configure their computer to be safe on the internet. They need to customize their browsers to block pop ups, block active x downloads to avoid viruses and/or worms.
	LaTeX and WORD
10	Task 1: Word Orientation: The mentor needs to give an overview of La TeX and Microsoft (MS) office or equivalent (FOSS) tool word: Importance of La TeX and MS office or equivalent (FOSS) tool Word as word Processors, Details of the four tasks and features that would be covered in each, Using La TeXand word – Accessing, overview of toolbars, saving files, Using help and resources, rulers, format painter in word.
	Task 2: Using LaTeX and Word to create a project certificate. Features to be covered:- For-
11	matting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colors, Inserting Header and Footer, Using Date and Time option in both LaTeX and Word.
12	Task 3: Creating project abstract Features to be covered:-Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.
13	Task 4: Creating a Newsletter: Features to be covered: - Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes, Paragraphs and Mail Merge in word.
	EXCEL
14	Excel Orientation: The mentor needs to tell the importance of MS office or equivalent (FOSS) tool Excel as a Spreadsheet tool, give the details of the four tasks and features that would be covered in each. Using Excel – Accessing, overview of toolbars, saving excel files, Using help and resources. Task 1: Creating a Scheduler - Features to be covered: Gridlines, Format Cells, Summation,
	auto fill, Formatting Text.
15	Task 2: Calculating GPA Features to be covered: - Cell Referencing, Formulae in excel – average, std. deviation, Charts, Renaming and Inserting worksheets, Hyper linking, Count function.

16	LOOKUP/VLOOKUP Tagle 2. Split calls from a page group and outling Souting Pagleon and logical angustum
16	Task 3: Split cells, freeze panes, group and outline, Sorting, Boolean and logical operators,
	Conditional formatting, VLOOKUP, HLOOKUP, Match & Index LOOKUP functions. POWER POINT
17	Task 1: Students will be working on basic power point utilities and tools which help them cre-
	ate basic power point presentations. PPT Orientation, Slide Layouts, Inserting Text, Word
	Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows in PowerPoint.
18	Task 2: Interactive presentations - Hyperlinks, Inserting –Images, Clip Art, Audio, Video, Ob-
	jects, Tables and Charts.
19	Task 3: Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide
	slotter, notes etc), and Inserting – Background, textures, Design Templates, Hidden slides.
	AI TOOLS – ChatGPT
	Task 1: Prompt Engineering: Experiment with different types of prompts to see how the
20	model responds. Try asking questions, starting conversations, or even providing incomplete
	sentences to see how the model completes them.
	• Ex: Prompt: "You are a knowledgeable AI. Please answer the following question: What is
	the capital of France?"
	Task 2: Creative Writing: Use the model as a writing assistant. Provide the beginning of a
21	story or a description of a scene, and let the model generate the rest of the content. This can be
21	a fun way to brainstorm creative ideas.
	• Ex: Prompt: "In a world where gravity suddenly stopped working, people started floating
	upwards. Write a story about how society adapted to this new reality." Task 3: Language Translation: Experiment with translation tasks by providing a sentence in
	one language and asking the model to translate it into another language. Compare the output to
22	see how accurate and fluent the translations are.
	• Ex: Prompt: "Translate the following English sentence to French: 'Hello, how are you doing
	today?"
	today.

HEALTH AND WELLNESS, YOGA AND SPORTS

(Common to AIDS, AIML, CE, CSBS, CSG, CIC & ME)

Course Objectives:

To make the students maintain their mental and physical wellness by balancing emotions in their life. It mainly enhances the essential traits required for the development of the personality

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge Level
1.	Understand the importance of yoga and sports for Physical fitness and sound	K2
1.	health.	112
2.	Demonstrate health-related fitness components.	K3
3.	Compare and contrast various activities that help enhance their health.	К3
4.	Assess current personal fitness levels.	К3
5.	Develop Positive Personality	K3

SYLLABUS

UNIT-I

Concept of health and fitness, Nutrition and Balanced diet, basic concept of immunity Relationship between diet and fitness, Globalization and its impact on health, Body Mass Index (BMI) of all age groups.

Activities:

- i) Organizing health awareness programmes in community
- ii) Preparation of health profile
- iii) Preparation of chart for balance diet for all age groups

UNIT-II

Concept of yoga, need for and importance of yoga, origin and history of yoga in Indian context, classification of yoga, Physiological effects of Asanas- Pranayama and meditation, stress management and yoga, Mental health and yoga practice.

Activities:

Yoga practices – Asana, Kriya, Mudra, Bandha, Dhyana, Surya Namaskar

UNIT-III

Concept of Sports and fitness, importance, fitness components, history of sports, Ancient and Modern Olympics, Asian games and Commonwealth games.

Activities:

i) Participation in one major game and one individual sport viz., Athletics, Volleyball, Basketball, Handball, Football, Badminton, Kabaddi, Kho-kho, Table tennis, Cricket etc. Practicing gen-

eral and specific warm up, aerobics

ii) Practicing cardiorespiratory fitness, treadmill, run test, 9 min walk, skipping and running.

- 4. Wiseman, John Lofty, SAS Survival Handbook: The Ultimate Guide to Surviving Anywhere Third Edition, William Morrow Paperbacks, 2014
- 5. The Sports Rules Book/ Human Kinetics with Thomas Hanlon. -- 3rd ed. Human Kinetics, Inc.2014

Evaluation Guidelines:

- 1. Evaluated for a total of 100 marks.
- 2. A student can select 6 activities of his/her choice with a minimum of 01 activity per unit. Each activity shall be evaluated by the concerned teacher for 15 marks, totalling to 90 marks.
- 3. A student shall be evaluated by the concerned teacher for 10 marks by conducting viva voce on the subject.

SAGI RAMA KRISHNAM RAJU ENGINEERING COLLEGE (AUTONOMOUS)

(Approved by AICTE, New Delhi, Affiliated to JNTUK, Kakinada)

Accredited by NAAC with 'A+' Grade.

Recognised as Scientific and Industrial Research Organisation SRKR MARG, CHINA AMIRAM, BHIMAVARAM – 534204 W.G.Dt., A.P., INDIA

ENGINEERING PHYSICS

(Common for AIDS, AIML, CE, CSBS, CSG, CIC, ME)

Course Objectives:

To bridge the gap between the Physics in school at 10+2 level and UG level engineering courses by identifying the importance of the optical phenomenon like Interference, Diffraction etc., enlightening the periodic arrangement of atoms in Crystalline Solids and concepts of Quantum mechanics, introduce novel concepts of Dielectric and Magnetic materials, Physics of Semiconductors.

Course Outcomes: At the end of the course students will be able to

S.No.	Outcome	Knowledge Level
1.	Analyze the intensity variation of light due to polarization, interference and diffraction.	K4
2.	Familiarize with the basics of crystals and their structures.	К3
3.	Summarize various types of polarization of dielectrics and classify the magnetic materials.	К3
4.	Apply the basic concepts of Quantum mechanics, free electron theory and fermi energy.	К3
5.	Classify the type of semiconductor using Hall effect.	K4

SYLLABUS

UNIT-I (10Hrs) Wave Optics Interference: Introduction - Principle of superposition - Interference of light - Interference in thin films (Reflection Geometry) & applications - Colours in thin films- Newton's Rings, Determination of wavelength and refractive index. Diffraction: Introduction - Fresnel and Fraunhofer diffractions - Fraunhofer diffraction due to single slit, double slit (Qualitative) & N-slits (Qualitative) - Diffraction Grating - Dispersive power and resolving power of Grating (Qualitative). Polarization: Introduction - Types of polarization - Polarization by reflection, refraction and Double refraction - Nicol's Prism - Half wave and Quarter wave plates. Crystallography and X-ray diffraction

	Crystallography and X-ray diffraction
	Crystallography: Space lattice, Basis, Unit Cell and lattice parameters – Bravais Lattices
UNIT-II	- crystal systems (3D) - coordination number - packing fraction of SC, BCC & FCC -
(10 Hrs)	Miller indices – separation between successive (hkl) planes.
	X- ray diffraction: Bragg's law - X-ray Diffractometer - crystal structure
	determination by Laue's and powder methods.

UNIT-III	Dielectric and Magnetic Materials
(10 Hrs)	Dielectric Materials: Introduction - Dielectric polarization - Dielectric polarizability,

Susceptibility, Dielectric constant and Displacement Vector – Relation between the electric vectors - Types of polarizations- Electronic (Quantitative), Ionic (Quantitative) and Orientation polarizations (Qualitative) - Lorentz internal field - Clausius- Mosotti equation - complex dielectric constant – Frequency dependence of polarization – dielectric loss.

Magnetic Materials: Introduction - Magnetic dipole moment - Magnetization-Magnetic susceptibility and permeability - Atomic origin of magnetism - Classification of magnetic materials: Dia, para, Ferro, Anti-ferro & Ferri magnetic materials - Domain concept for Ferromagnetism & Domain walls (Qualitative) - Hysteresis - soft and hard magnetic materials.

Quantum Mechanics and Free electron Theory

UNIT-IV (10 Hrs)

Quantum Mechanics: Dual nature of matter – Heisenberg's Uncertainty Principle – Significance and properties of wave function – Schrodinger's time independent and dependent wave equations - Particle in a one-dimensional infinite potential well.

Free Electron Theory: Classical free electron theory (Qualitative with discussion of merits and demerits) Quantum free electron theory – Electrical conductivity based on quantum free electron theory - Fermi-Dirac distribution - Density of states - Fermi energy.

UNIT-V (10 Hrs)

Semiconductors

Semiconductors: Formation of energy bands – classification of crystalline solids - Intrinsic semiconductors - Density of charge carriers – Electrical conductivity – Fermi level – Extrinsic semiconductors - density of charge carriers – dependence of Fermi energy on carrier concentration and temperature - Drift and diffusion currents – Einstein's equation – Hall effect and its applications.

INTRODUCTION TO PROGRAMMING

(Common to CE, ECE, EEE, ME)

Course Objectives:

- 1. Familiarize students with programming concepts such as data types, control structures, functions, and arrays.
- 2. Gain knowledge of the operators, selection and repetition statements in C.
- 3. Understand and Apply different programming concepts to deal with real world problems.

Course Outcomes: At the end of the course students will be able to

S.No	Outcome				
	Outcome	Level			
1.	Explain fundamentals of computer, programming languages. Use appropriate data types for storing data and choose the operators for writing complex expressions in C.	K3			
2.	Make use of Decision Making and Looping statements to Solve various problems in C.	К3			
3.	Solve problems using Arrays and Strings for efficiently accessing homogenous data.	К3			
4.	Develop programs using pointers, structures and unions.	К3			
5.	Develop programs to handle functions for reusability and redundancy. Apply file-handling functions to read/write data to files.	К3			

SYLLABUS

Introduction to Computer and Computer Languages:

History of Computers, Basic organization of a computer: ALU, input-output units, memory, program counter, Introduction to Programming Languages, Flow charts; Algorithms, Pseudo code.

UNIT-I (10Hrs)

Introduction to C Programming:

Data types, Key words; Variables and Constants; Format-Specifiers, basic input and output statements; Operators: Arithmetic, relational, logical operators; Assignment, increment, decrement, conditional operators; Bitwise and special operators, operator precedence and associativity, type conversion.

UNIT-II (10 Hrs)

Control Structures:

Decision Making statements: Simple if, if-else; nested if, else-if ladder; Switch-Case **Looping Statements:** While loop; Do-while loop; For loop; Comparison of while, do-while and for; Nested loops; Break and continue.

UNIT-1 (10 Hr	Arrays: Introduction to Arrays, one dimensional Arrays; two dimensional Arrays; Applications of 1D-Arrays: Bubble Sort; Insertion Sort; Selection Sort; Linear Search and Binary Search; Applications of 2D-Arrays: Matrix Addition; Matrix Multiplication and Transpose; Strings: Introduction to Strings; string handling functions; Implementation of string copy and string concatenation without using string library functions.							
	concatenation without using string notary renetions.							
	Structures and Unions:							
	Structures, Accessing elements of a structure, Array of structures; pointer to structure; Un-							
UNIT-	· · · · · · · · · · · · · · · · · · ·

3

4

Objective: Learn how to define variables with the desired data-type, initialize them with appropriate values and how arithmetic operators can be used with variables and constants.

Suggested Experiments/Activities:

Tutorial 3: Variable types and type conversions:

Lab 3: Simple computational problems using arithmetic expressions.

- i) Finding the square root of a given number
- ii) Finding compound interest
- iii) Area of a triangle using heron's formulae
- iv) Distance travelled by an object

WEEK 4

Objective: Explore the full scope of expressions, type-compatibility of variables & constants and operators used in the expression and how operator precedence works.

Suggested Experiments/Activities:

Tutorial 4: Operators and the precedence and as associativity:

Lab4: Simple computational problems using the operator' precedence and associativity

i) Evaluate the following expressions.

a.
$$A+B*C+(D*E) + F*G$$

b.
$$A/B*C-B+A*D/3$$

d.
$$J=(i++)+(++i)$$

- ii) Find the maximum of three numbers using conditional operator
- iii) Take marks of 5 subjects in integers, and find the total, average in float

WEEK 5

Objective: Explore the full scope of different variants of "if construct" namely if-else, null else, if-else if*-else, switch and nested-if including in what scenario each one of them can be used and how to use them. Explore all relational and logical operators while writing conditionals for "if construct".

Suggested Experiments/Activities:

5 **Tutorial 5:** Branching and logical expressions:

Lab 5: Problems involving if-then-else structures.

- i) Write a C program to find the max and min of four numbers using if-else.
- ii) Write a C program to generate electricity bill.
- iii) Find the roots of the quadratic equation.
- iv) Write a C program to simulate a calculator using switch case.
- v) Write a C program to find the given year is a leap year or not.

	WEEK 6							
	Objective: Explore the full scope of iterative constructs namely while loop, do-while loop and							
	for loop in addition to structured jump constructs like break and continue including when each							
	of these statements is more appropriate to use.							
	Suggested Experiments/Activities:							
6	Tutorial 6: Loops, while and for loops							
	Lab 6: Iterative problems e.g., the sum of series							
	i) Find the factorial of given number using any loop.							
	ii) Find the given number is a prime or not.							
	iii) Compute sine and cos series							
	iv) Checking a number palindrome							
	v) Construct a pyramid of numbers.							
	WEEK 7:							
	Objective: Explore the full scope of Arrays construct namely defining and initializing 1-D and							
	2-D and more generically n-D arrays and referencing individual array elements from the de-							
	fined array. Using integer 1-D arrays, explore search solution linear search.							
	Suggested Experiments/Activities:							
7	Tutorial 7: 1 D Arrays: searching.							
'	Lab 7:1D Array manipulation, linear search							
	i) Find the min and max of a 1-D integer array.							
	ii) Perform linear search on 1D array.							
	iii) The reverse of a 1D integer array							
	iv)Find 2's complement of the given binary number.							
	v) Eliminate duplicate elements in an array							
	WEEK 8: ENGINEERING COLLEGE							
	Objective: Explore the difference between other arrays and character arrays that can be used as							
	Strings by using null character and get comfortable with string by doing experiments that will							
	reverse a string and concatenate two strings. Explore sorting solution bubble sort using integer							
	arrays.							
8	Suggested Experiments/Activities: Tutorial 8: 2 D arrays, sorting and Strings.							
	Lab 8: Matrix problems, String operations, Bubble sort							
	i) Addition of two matrices							
	ii) Multiplication two matrices							
	iii) Sort array elements using bubble sort							
	iv) Concatenate two strings without built-in functions							

v) Reverse a string using built-in and without built-in string functions

WEEK 9:

9

Objective: Explore pointers to manage a dynamic array of integers, including memory allocation & value initialization, resizing changing and reordering the contents of an array and memory de-allocation using malloc (), calloc (), realloc () and free () functions. Gain experience processing command-line arguments received by C

Suggested Experiments/Activities:

Tutorial 9: Pointers, structures and dynamic memory allocation

Lab 9: Pointers and structures, memory dereferences.

- i) Write a C program to find the sum of a 1D array using malloc()
- ii) Write a C program to find the total, average of n students using structures
- iii) Enter n students data using calloc() and display failed students list
- iv) Read student name and marks from the command line and display the student details along with the total.
- v) Write a C program to implement realloc()

WEEK 10:

Objective: Experiment with C Structures, Unions, bit fields and self-referential structures (Singly linked lists) and nested structures

Suggested Experiments/Activities:

Tutorial 10: Bitfields, Self-Referential Structures, Linked lists

Lab10 : Bitfields, linked lists Read and print a date using dd/mm/yyyy format using bit-fields and differentiate the same without using bit- fields

- i) Create and display a singly linked list using self-referential structure.
- ii) Demonstrate the differences between structures and unions using a C program.
- iii) Write a C program to shift/rotate using bitfields.
- iv) Write a C program to copy one structure variable to another structure of the same type.

WEEK 11:

Objective: Explore the Functions, sub-routines, scope and extent of variables, doing some experiments by parameter passing using call by value. Basic methods of numerical integration

Suggested Experiments/Activities:

Tutorial 11: Functions, call by value, scope and extent,

Lab 11: Simple functions using call by value, solving differential equations using Eulers theorem.

- i) Write a C function to calculate NCR value.
- ii) Write a C function to find the length of a string.
- iii) Write a C function to transpose of a matrix.
- iv) Write a C function to demonstrate numerical integration of differential equations using Euler's method

11

10

	WEEK 12:								
	Objective: Explore how recursive solutions can be programmed by writing recursive functions that can be invoked from the main by programming at-least five distinct problems that have								
	naturally recursive solutions.								
	Suggested Experiments/Activities:								
12	Tutorial 12: Recursion, the structure of recursive calls								
	Lab 12: Recursive functions								
	i) Write a recursive function to generate Fibonacci series.								
	ii) Write a recursive function to find the lcm of two numbers.								
	iii) Write a recursive function to find the factorial of a number.								
	iv) Write a C Program to implement Ackermann function using recursion.								
	v) Write a recursive function to find the sum of series.								
	WEEK 13:								
	Objective: Explore the basic difference between normal and pointer variables, Arithmetic oper-								
	ations using pointers and passing variables to functions using pointers								
	Suggested Experiments/Activities:								
	Tutorial 13: Call by reference, dangling pointers								
13	Lab 13: Simple functions using Call by reference, Dangling pointers.								
	i) Write a C program to swap two numbers using call by reference.								
	ii) Demonstrate Dangling pointer problem using a C program.								
	iii) Write a C program to copy one string into another using pointer.								
	iv)Write a C program to find no of lowercase, uppercase, digits and other characters using								
	pointers.								
	WEEK14:								
	Objective: To understand data files and file handling with various file I/O functions. Explore								
	the differences between text and binary files.								
	Suggested Experiments/Activities:								
	Tutorial 14: File handling								
14	Lab 14: File operations								
	i) Write a C program to write and read text into a file.								
	ii) Write a C program to write and read text into a binary file using fread() and fwrite()								
	iii) Copy the contents of one file to another file.								
	iv) Write a C program to merge two files into the third file using command-line arguments.								
	v) Find no. of lines, words and characters in a file								
/D 41	vi) Write a C program to print last n characters of a given file.

NSS/NCC/SCOUTS & GUIDES/COMMUNITY SERVICE

(Common to AIDS, AIML, CE, CSBS, CSG, CIC, ME)

Course Objectives:

To impart discipline, character, fraternity, teamwork, social consciousness among the students and engaging them in selfless service.

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge
		Level
1.	Understand the importance of discipline, character and service motto.	K2
2.	Solve some societal issues by applying acquired knowledge, facts, and	K3
	techniques.	
3.	Explore human relationships by analyzing social problems.	K4
4.	Determine to extend their help for the fellow beings and downtrodden people.	К3
5.	Develop leadership skills and civic responsibilities.	К3

SYLLABUS

UNIT-I Orientation

General Orientation on NSS/NCC/ Scouts & Guides/Community Service activities, career guidance.

Activities:

- i) Conducting –ice breaking sessions-expectations from the course-knowing personal talents and skills
- ii) Conducting orientations programs for the students –future plans-activities-releasing road map etc.
- iii) Displaying success stories-motivational biopics- award winning movies on societal issues etc.
- iv) Conducting talent show in singing patriotic songs-paintings- any other contribution.

UNIT-II Nature & Care

Activities:

- i) Best out of waste competition.
- ii) Poster and signs making competition to spread environmental awareness.
- iii) Recycling and environmental pollution article writing competition.
- iv) Organising Zero-waste day.
- v) Digital Environmental awareness activity via various social media platforms.
- vi) Virtual demonstration of different eco-friendly approaches for sustainable living.
- vii) Write a summary on any book related to environmental issues.

UNIT-III Community Service

Activities:

- i) Conducting One Day Special Camp in a village contacting village-area leaders- Survey in the village, identification of problems- helping them to solve via media- authorities experts-etc.
- ii) Conducting awareness programs on Health-related issues such as General Health, Mental health, Spiritual Health, HIV/AIDS,
- iii) Conducting consumer Awareness. Explaining various legal provisions etc.
- iv) Women Empowerment Programmes- Sexual Abuse, Adolescent Health and Population Education.
- v) Any other programmes in collaboration with local charities, NGOs etc.

- 5. Ram Ahuja. Social Problems in India, Rawat Publications, New Delhi.

Evaluation Guidelines:

- 1. Evaluated for a total of 100 marks.
- 2. A student can select 6 activities of his/her choice with a minimum of 01 activity per unit. Each activity shall be evaluated by the concerned teacher for 15 marks, totalling to 90 marks.
- 3. A student shall be evaluated by the concerned teacher for 10 marks by conducting viva voce on the subject.
