	es	•								
	C	rammar: Part	s of Spa	ech Ras	ic Senter	ce Struct	ures formin	a anestions		

	Lesson: NATURE: The Brook by Alfred Tennyson (Poem)
	Listening: Answering a series of questions about main ideas and supporting ideas after
	listening to audio texts.
	Speaking: Discussion in pairs/small groups on specific topics followed by formal, struc-
TINITE II	
UNIT-II	tured short talks/presentations.
(10 Hrs)	Reading: Identifying sequence of ideas; recognizing verbal techniques that help to link
	the ideas in a paragraph together.
	Writing: Structure of a paragraph - Paragraph writing (specific topics)
	Grammar: Cohesive devices - linkers, use of articles and zero article; prepositions.
	Vocabulary: Homonyms, Homophones, Homographs.
	•
	Lesson: BIOGRAPHY: Elon Musk
	Listening: Listening for global comprehension and summarizing the texts.
	Speaking: Discussing specific topics in pairs or small groups and reporting what is dis-
	cussed.
UNIT-III	Reading: Reading the texts in detail by making basic inferences-recognizing and inter-
(10 Hrs)	
(10 1113)	preting specific context-specific clues; strategies to use textual signs for comprehension.
	Writing: Summarizing, Note-making, Paraphrasing
	Grammar: Verbs-tenses; subject-verb agreement; Compounding, Collocational possibil-
	ity.
	Vocabulary: Words often confused, Jargons
	Lesson: INSPIRATION: The Toys of Peace by Saki
	Listening: Making predictions while listening to conversations/ transactional dialogues
	with and without audio/video.
	Speaking: Role plays for practice in functional and academic contexts -asking for and
	giving information/directions.
UNIT-IV	Reading: Studying the importance of graphical representation - information transfer in
(10 Hrs)	texts to convey information, reveal trends/patterns/relationships, communicate processes
	or display complicated data.
	Writing: Significance and types of Letter Writing: Official Letters, Resume writing.
	Grammar: Reporting verbs, Direct & Indirect speech, Active & Passive Voice
	Vocabulary: Compound words, Collocations.
	A MORNA TRONG TO B. C.
	Lesson: MOTIVATION: The Power of Intrapersonal Communication (An Essay)
	Listening: Identifying key terms, understanding concepts and answering a series of rele-
	vant questions that test comprehension from audio/video resources.
UNIT-V	Speaking: Formal oral presentations on topics from academic contexts
	Reading: Reading comprehension.
(10 Hrs)	Writing: Writing structured essays on specific topics.
	Grammar: Editing short texts–identifying and correcting common errors in grammar and
1	usage (articles, prepositions, tenses, subject verb agreement, punctuation)
	Vocabulary: Technical Jargons
	I I CONTROL I I COMMINICAL CALECTA

ENGINEERING CHEMISTRY

(For CE & ME)

Course Objectives:

- 1. Familiarize the students with different application-oriented topics like new generation engineering materials, storage devices, different instrumental methods etc
- 2. Impart a scientific approach and to familiarize the applications of chemistry in the field of technology
- 3. Encourage the students to learn about the chemical composition and properties of the various materials for societal applications

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge Level
1.	Apply the knowledge of electrochemistry principles to design energy storage devices and understanding the principle, mechanism of corrosion and utilization of various techniques to control corrosion.	К3
2.	Apply the knowledge about quality of water and its treatment methods for domestic and industrial applications. Analyze the water quality parameters by different chemical analytical methods	К3
3.	Design and construct engineering products like refractories, composites, building materials for societal applications. Also, can apply the knowledge of lubrication	К3
4.	Develop polymer composites, synthetic polymers and formulation of polymers and their use in design for sustainable development. Develop the analytical knowledge of fuels and their economics, advantages, and limitations	K4
5.	Develop the knowledge of nanomaterials and colloids for societal application and develop the ability to manufacture nanomaterials by chemical and environmental benign methods	К3

SYLLABUS

Electrochemistry and Applications

UNIT-I (10Hrs)

Electrodes – electrode potential, determination of electrode potential by calomel electrode, electrochemical cell, Primary cells – Zinc-air battery, Secondary cells – lithium-ion batteries- working principle of the batteries including cell reactions; Fuel cells-Basic Concepts, the principle and working of hydrogen-oxygen fuel cell- Polymer Electrolyte Membrane Fuel cells (PEMFC).

Corrosion: Introduction to corrosion, metal oxide formation by dry corrosion, Pilling Bedworth ratios and uses, electrochemical theory of corrosion, galvanic corrosion, differential aeration cell corrosion, Factors affecting the corrosion, cathodic protection- sacrifi-

	cial anodic method-impressed current cathodic protection method- and anodic protection
	galvanizing, tinning, and electroplating of copper and silver.
	Water Technology
UNIT-II (10 Hrs)	Soft and hardwater, Estimation of hardness of water by EDTA Method, Estimation of dissolved Oxygen by winkler's method- Boiler troubles –Priming, foaming, scale and sludge Caustic embrittlement, Water softening methods-Ion-exchange processes - desalination of brackish water, reverse osmosis (RO) and electrodialysis, Drinking water treatment - Specifications for drinking water by Bureau of Indian Standards (BIS) and World health organization(WHO) standards.
	Modern Engineering Materials
	Composites- Definition, Constituents, Classification- Particle and Fiber reinforced composites, properties, and Engineering applications. Refractories- Classification, Properties, and Applications.
UNIT-III (10 Hrs)	Lubricants- Classification, Functions of lubricants, Mechanism of lubrication (thick film thin film and extreme pressure), Properties of lubricating oils – Viscosity, Viscosity Index Flash point, Fire point, Cloud point, saponification.
	Building materials- Portland Cement, manufacturing of Portland cement by wet process Setting and Hardening of cement.
	Polymers and Fuel Chemistry
UNIT-IV (10 Hrs)	Introduction to polymers, Mechanism of chain growth (free radical addition polymerization), Thermoplastics and Thermo-setting plastics-: Differences between Thermoplastics and Thermo-setting plastics, Preparation, properties and applications of poly styrene. PVC Ny lon 6,6 and Bakelite. Elastomers – Preparation, properties and applications of Buna S, Buna N. Fuels – Types of fuels, calorific value of fuels (Gross calorific value& Net calorific value) Analysis of coal (Proximate and Ultimate analysis), Liquid Fuels, refining of petroleum Octane and Cetane number- alternative fuels-preparation and applications of ethanol and bio fuel-bio diesel as fuels.
UNIT-V (10 Hrs)	Surface Chemistry and Nanomaterials Introduction to surface chemistry, colloids, synthesis of colloids (Braggs Method), nanometals and nanometal oxides, preparation -sol-gel method, chemical precipitation method and biological method (plant material derived synthesis), stabilization of colloids and nanomaterials by stabilizing agents, applications—catalysis, medicine, sensors, etc (Any-five applications).

	PART B: BASIC MECHANICAL ENGINEERING									
Cour	se Objectives:									
1	Get familiarized with the scope and importance of Mechanical Engineering in di	fferent sectors								
1.	and industries.									
2.	Explain different engineering materials and different manufacturing processes.									
3.	Provide an overview of different thermal and mechanical transmission systems and	d introduce ba-								
3.	sics of robotics and its applications.									
Cour	se Outcomes: At the end of the course students will be able to									
S.No	Outcome	Knowledge Level								
1.	Apply the use of engineering materials and importance of Mechanical Engineering in diverse sectors and industries.	K3								
2.	Apply the Working of basic thermal engineering systems and different manufacturing processes.	К3								
——	_									

K3

Illustrate the basic operation of power plants and fundamentals of different me-

chanical power transmission systems, robotics, and their applications.

3.

		SYLLABUS							
UNI' (8 H		Introduction to Mechanical Engineering: Role of Mechanical Engineering in Industries and Society- Technologies in different sectors such as Energy, Manufacturing, Automotive, Aerospace, and Marine sectors. Engineering Materials - Metals-Ferrous and Non-ferrous, Ceramics, Composites, Smart materials.							
UNIT		Manufacturing Processes: Principles of Casting, Forming, joining processes, Machining, Introduction to CNC machines, 3D printing and Smart manufacturing. Thermal Engineering – Working principle of Cochran and Babcock & Wilcox Boilers, Working of basic principle of domestic refrigerator and air-conditioner, IC engines classification-2-Stroke, 4-Stroke, SI/CI Engines, Introduction to Hybrid and Electric Vehicles.							
Power plants – Working principle of Steam, Diesel, Nuclear power plants. Mechanical Power Transmission - Belt Drives, Chain, Rope drives, Gear Drives at their applications. Introduction to Robotics - Joints & links and applications of robotics. (Note: The course covers only the basic principles of Civil and Mechanical Engineering systems. To									
evalua	ation s	shall be intended to test only the fundamentals of the course)

2			-			_			•		
through the video which shows the process of assembling a PC. A video would be part of the course content.							<u> </u>				
3	Task 3	: Every stude	ent shoul	d individ	ually inst	all MS w	indows on t	he personal c	omputer. Lab		
3	instruct	or should ve	rify the i	nstallatio	n and foll	ow it up	vith a Viva.				
		=				_		-	ıld have win-		
4			=		_				oth Windows		
	and Lir	ux. Lab insti	ructors sh	nould ver	ify the ins	tallation	and follow	t up with a Vi	iva		

5	Task 5: Every student should install BOSS on the computer. The system should be configured as dual boot (VMWare) with both Windows and BOSS. Lab instructors should verify the installation and follow it up with a Viva
	Internet & World Wide Web
6	Task 1: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate, to the instructor, how to access the websites and email. If there is no internet connectivity preparations need to be made by the instructors to simulate the WWW on the LAN.
	Task 2: Web Browsers, Surfing the Web: Students customize their web browsers with the
7	LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.
8	Task 3: Search Engines & Netiquette: Students should know what search engines are and how to use the search engines. A few topics would be given to the students for which they need to search on Google. This should be demonstrated to the instructors by the student.
9	Task 4: Cyber Hygiene: Students would be exposed to the various threats on the internet and would be asked to configure their computer to be safe on the internet. They need to customize their browsers to block pop ups, block active x downloads to avoid viruses and/or worms.
	LaTeX and WORD
10	Task 1: Word Orientation: The mentor needs to give an overview of La TeX and Microsoft (MS) office or equivalent (FOSS) tool word: Importance of La TeX and MS office or equivalent (FOSS) tool Word as word Processors, Details of the four tasks and features that would be covered in each, Using La TeXand word – Accessing, overview of toolbars, saving files, Using help and resources, rulers, format painter in word.
	Task 2: Using LaTeX and Word to create a project certificate. Features to be covered:- For-
11	matting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colors, Inserting Header and Footer, Using Date and Time option in both LaTeX and Word.
12	Task 3: Creating project abstract Features to be covered:-Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.
13	Task 4: Creating a Newsletter: Features to be covered: - Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes, Paragraphs and Mail Merge in word.
	EXCEL
14	Excel Orientation: The mentor needs to tell the importance of MS office or equivalent (FOSS) tool Excel as a Spreadsheet tool, give the details of the four tasks and features that would be covered in each. Using Excel – Accessing, overview of toolbars, saving excel files, Using help and resources. Task 1: Creating a Scheduler - Features to be covered: Gridlines, Format Cells, Summation,
	auto fill, Formatting Text.
15	Task 2: Calculating GPA Features to be covered: - Cell Referencing, Formulae in excel – average, std. deviation, Charts, Renaming and Inserting worksheets, Hyper linking, Count function.

	LOOKUP/VLOOKUP
16	Task 3: Split cells, freeze panes, group and outline, Sorting, Boolean and logical operators,
	Conditional formatting, VLOOKUP, HLOOKUP, Match & Index LOOKUP functions.
	POWER POINT
17	Task 1: Students will be working on basic power point utilities and tools which help them cre-
17	ate basic power point presentations. PPT Orientation, Slide Layouts, Inserting Text, Word
	Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows in PowerPoint.
18	Task 2: Interactive presentations - Hyperlinks, Inserting –Images, Clip Art, Audio, Video, Ob-
10	jects, Tables and Charts.
19	Task 3: Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide
1)	slotter, notes etc), and Inserting – Background, textures, Design Templates, Hidden slides.
	AI TOOLS – ChatGPT
	Task 1: Prompt Engineering: Experiment with different types of prompts to see how the
20	model responds. Try asking questions, starting conversations, or even providing incomplete
20	sentences to see how the model completes them.
	• Ex: Prompt: "You are a knowledgeable AI. Please answer the following question: What is
	the capital of France?"
	Task 2: Creative Writing: Use the model as a writing assistant. Provide the beginning of a
	story or a description of a scene, and let the model generate the rest of the content. This can be
21	a fun way to brainstorm creative ideas.
	• Ex: Prompt: "In a world where gravity suddenly stopped working, people started floating
	upwards. Write a story about how society adapted to this new reality."
	Task 3: Language Translation: Experiment with translation tasks by providing a sentence in
	one language and asking the model to translate it into another language. Compare the output to
22	see how accurate and fluent the translations are.
	• Ex: Prompt: "Translate the following English sentence to French: 'Hello, how are you doing
	today?""

HEALTH AND WELLNESS, YOGA AND SPORTS

(Common to AIDS, AIML, CE, CSBS, CSG, CIC & ME)

Course Objectives:

To make the students maintain their mental and physical wellness by balancing emotions in their life. It mainly enhances the essential traits required for the development of the personality

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge
5.110	Outcome	Level
1	Understand the importance of yoga and sports for Physical fitness and sound	K2
1.	health.	K2
2.	Demonstrate health-related fitness components.	К3
3.	Compare and contrast various activities that help enhance their health.	К3
4.	Assess current personal fitness levels.	К3
5.	Develop Positive Personality	K3

SYLLABUS

UNIT-I

Concept of health and fitness, Nutrition and Balanced diet, basic concept of immunity Relationship between diet and fitness, Globalization and its impact on health, Body Mass Index (BMI) of all age groups.

Activities:

- i) Organizing health awareness programmes in community
- ii) Preparation of health profile
- iii) Preparation of chart for balance diet for all age groups

UNIT-II

Concept of yoga, need for and importance of yoga, origin and history of yoga in Indian context, classification of yoga, Physiological effects of Asanas- Pranayama and meditation, stress management and yoga, Mental health and yoga practice.

Activities:

Yoga practices – Asana, Kriya, Mudra, Bandha, Dhyana, Surya Namaskar

UNIT-III

Concept of Sports and fitness, importance, fitness components, history of sports, Ancient and Modern Olympics, Asian games and Commonwealth games.

Activities:

i) Participation in one major game and one individual sport viz., Athletics, Volleyball, Basketball, Handball, Football, Badminton, Kabaddi, Kho-kho, Table tennis, Cricket etc. Practicing gen-

eral and specific warm up, aerobics

ii) Practicing cardiorespiratory fitness, treadmill, run test, 9 min walk, skipping and running.

Reference Books:

- 1. Gordon Edlin, Eric Golanty. Health and Wellness, 14th Edn. Jones & Bartlett Learning, 2022
- 2. T.K.V.Desikachar. The Heart of Yoga: Developing a Personal Practice
- 3. Archie J.Bahm. Yoga Sutras of Patanjali, Jain Publishing Company, 1993
- 4. Wiseman, John Lofty, SAS Survival Handbook: The Ultimate Guide to Surviving Anywhere Third Edition, William Morrow Paperbacks, 2014
- 5. The Sports Rules Book/ Human Kinetics with Thomas Hanlon. -- 3rd ed. Human Kinetics, Inc.2014

Evaluation Guidelines:

- 1. Evaluated for a total of 100 marks.
- 2. A student can select 6 activities of his/her choice with a minimum of 01 activity per unit. Each activity shall be evaluated by the concerned teacher for 15 marks, totalling to 90 marks.
- 3. A student shall be evaluated by the concerned teacher for 10 marks by conducting viva voce on the subject.

ENGINEERING PHYSICS

(Common for AIDS, AIML, CE, CSBS, CSG, CIC, ME)

Course Objectives:

To bridge the gap between the Physics in school at 10+2 level and UG level engineering courses by identifying the importance of the optical phenomenon like Interference, Diffraction etc., enlightening the periodic arrangement of atoms in Crystalline Solids and concepts of Quantum mechanics, introduce novel concepts of Dielectric and Magnetic materials, Physics of Semiconductors.

Course Outcomes: At the end of the course students will be able to

S.No.	Outcome	Knowledge Level
1.	Analyze the intensity variation of light due to polarization, interference and diffraction.	K4
2.	Familiarize with the basics of crystals and their structures.	К3
3.	Summarize various types of polarization of dielectrics and classify the magnetic materials.	К3
4.	Apply the basic concepts of Quantum mechanics, free electron theory and fermi energy.	К3
5.	Classify the type of semiconductor using Hall effect.	K4

SYLLABUS

Wave Optics Interference: Introduction - Principle of superposition - Interference of light - Interference in thin films (Reflection Geometry) & applications - Colours in thin films- Newton's Rings, Determination of wavelength and refractive index. UNIT-I Diffraction: Introduction - Fresnel and Fraunhofer diffractions - Fraunhofer diffraction (10Hrs) due to single slit, double slit (Qualitative) & N-slits (Qualitative) - Diffraction Grating -Dispersive power and resolving power of Grating (Qualitative). Polarization: Introduction - Types of polarization - Polarization by reflection, refraction and Double refraction - Nicol's Prism - Half wave and Ouarter wave plates. Crystallography and X-ray diffraction Crystallography: Space lattice, Basis, Unit Cell and lattice parameters – Bravais Lattices UNIT-II - crystal systems (3D) - coordination number - packing fraction of SC, BCC & FCC -(10 Hrs) Miller indices – separation between successive (hkl) planes. X- ray diffraction: Bragg's law - X-ray Diffractometer - crystal structure determination by Laue's and powder methods.

Dielectric Materials: Introduction - Dielectric polarization - Dielectric polarizability,

Dielectric and Magnetic Materials

UNIT-III (10 Hrs) Susceptibility, Dielectric constant and Displacement Vector – Relation between the electric vectors - Types of polarizations- Electronic (Quantitative), Ionic (Quantitative) and Orientation polarizations (Qualitative) - Lorentz internal field - Clausius- Mosotti equation - complex dielectric constant – Frequency dependence of polarization – dielectric loss.

Magnetic Materials: Introduction - Magnetic dipole moment - Magnetization-Magnetic susceptibility and permeability - Atomic origin of magnetism - Classification of magnetic materials: Dia, para, Ferro, Anti-ferro & Ferri magnetic materials - Domain concept for Ferromagnetism & Domain walls (Qualitative) - Hysteresis - soft and hard magnetic materials.

Quantum Mechanics and Free electron Theory

UNIT-IV (10 Hrs)

Quantum Mechanics: Dual nature of matter – Heisenberg's Uncertainty Principle – Significance and properties of wave function – Schrodinger's time independent and dependent wave equations - Particle in a one-dimensional infinite potential well.

Free Electron Theory: Classical free electron theory (Qualitative with discussion of merits and demerits) Quantum free electron theory – Electrical conductivity based on quantum free electron theory - Fermi-Dirac distribution - Density of states - Fermi energy.

Semiconductors

UNIT-V (10 Hrs)

Semiconductors: Formation of energy bands – classification of crystalline solids - Intrinsic semiconductors - Density of charge carriers – Electrical conductivity – Fermi level – Extrinsic semiconductors - density of charge carriers – dependence of Fermi energy on carrier concentration and temperature - Drift and diffusion currents – Einstein's equation – Hall effect and its applications.

INTRODUCTION TO PROGRAMMING

(Common to CE, ECE, EEE, ME)

Course Objectives:

- 1. Familiarize students with programming concepts such as data types, control structures, functions, and arrays.
- 2. Gain knowledge of the operators, selection and repetition statements in C.
- 3. Understand and Apply different programming concepts to deal with real world problems.

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge
5.110	Outcome	Level
1.	Explain fundamentals of computer, programming languages. Use appropriate data types for storing data and choose the operators for writing complex expressions in C.	K3
2.	Make use of Decision Making and Looping statements to Solve various problems in C.	K3
3.	Solve problems using Arrays and Strings for efficiently accessing homogenous data.	K3
4.	Develop programs using pointers, structures and unions.	К3
5.	Develop programs to handle functions for reusability and redundancy. Apply file-handling functions to read/write data to files.	К3

SYLLABUS

Introduction to Computer and Computer Languages:

History of Computers, Basic organization of a computer: ALU, input-output units, memory, program counter, Introduction to Programming Languages, Flow charts; Algorithms, Pseudo code.

UNIT-I (10Hrs)

Introduction to C Programming:

Data types, Key words; Variables and Constants; Format-Specifiers, basic input and output statements; Operators: Arithmetic, relational, logical operators; Assignment, increment, decrement, conditional operators; Bitwise and special operators, operator precedence and associativity, type conversion.

UNIT-II (10 Hrs)

Control Structures:

Decision Making statements: Simple if, if-else; nested if, else-if ladder; Switch-Case **Looping Statements:** While loop; Do-while loop; For loop; Comparison of while, do-while and for; Nested loops; Break and continue.

	Γ.					
UNIT-I (10 Hrs	Applications of 2D-Arrays: Matrix Addition: Matrix Multiplication and Transpose:					
UNIT-I (10 Hrs						
	Pointers, dereferencing and address operators, Pointer arithmetic; Accessing array elements using pointers;					
UNIT- (10 Hrs	Functions: Functions, Declaration, Definition, call; Actual and formal parameters, return values; Call by value, call by reference; passing and returning pointers through functions; Passing arrays to functions; Dynamic memory allocation, malloc(), calloc(), realloc(), free(), storage classes; Command line arguments. File Handling: Files, file streams, file types; File modes of operation; Functions for reading from a files; Functions to write data to a file; Random file access functions; Macros

COMPUTER PROGRAMMING LAB

(Common to CE, ECE, EEE, ME)

Course Objectives:

- 1 To be familiar with the programming concepts of C Language.
- 2 To provide hands on experience with coding and debugging.
- 3 To foster logical thinking and problem-solving skills using programming.

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge
5.110	Outcome	Level
1	Develop C Programs with utilize memory efficiently using various programming	К3
1	constructs.	KS
2	Select appropriate control structure to Solve real world problems.	K4
3	Solve various complex problems using Modular Programming skills.	K4
4	Develop, Debug and Execute programs that demonstrate the applications of ar-	K4
4	rays, functions, basic concepts of pointers in C.	N4

SYLLABUS

WEEK 1

Objective: Getting familiar with the programming environment on the computer and writing the first program.

Suggested Experiments/Activities:

1 **Tutorial 1:** Problem-solving using Computers.

Lab1: Familiarization with programming environment

- i) Basic Linux environment and its editors like Vi, Vim & Emacs etc.
- ii) Exposure to Turbo C, gcc
- iii) Writing simple programs using printf(), scanf()

WEEK 2

2

Objective: Getting familiar with how to formally describe a solution to a problem in a series of finite steps both using textual notation and graphic notation.

Suggested Experiments / Activities:

Tutorial 2: Problem-solving using Algorithms and Flow charts.

- **Lab 1:** Converting algorithms/flow charts into C Source code. Developing the algorithms/flowcharts for the following sample programs
 - i) Sum and average of 3 numbers
 - ii) Conversion of Fahrenheit to Celsius and vice versa
 - iii) Simple interest calculation

1 X/	F)	Ľ.	K	3
**	ועיו	עי.	1	J

3

4

Objective: Learn how to define variables with the desired data-type, initialize them with appropriate values and how arithmetic operators can be used with variables and constants.

Suggested Experiments/Activities:

Tutorial 3: Variable types and type conversions:

Lab 3: Simple computational problems using arithmetic expressions.

- i) Finding the square root of a given number
- ii) Finding compound interest
- iii) Area of a triangle using heron's formulae
- iv) Distance travelled by an object

WEEK 4

Objective: Explore the full scope of expressions, type-compatibility of variables & constants and operators used in the expression and how operator precedence works.

Suggested Experiments/Activities:

Tutorial 4: Operators and the precedence and as associativity:

Lab4: Simple computational problems using the operator' precedence and associativity

i) Evaluate the following expressions.

a.
$$A+B*C+(D*E) + F*G$$

d.
$$J=(i++)+(++i)$$

- ii) Find the maximum of three numbers using conditional operator
- iii) Take marks of 5 subjects in integers, and find the total, average in float

WEEK 5

Objective: Explore the full scope of different variants of "if construct" namely if-else, null else, if-else if*-else, switch and nested-if including in what scenario each one of them can be used and how to use them. Explore all relational and logical operators while writing conditionals for "if construct".

Suggested Experiments/Activities:

5 **Tutorial 5:** Branching and logical expressions:

Lab 5: Problems involving if-then-else structures.

- i) Write a C program to find the max and min of four numbers using if-else.
- ii) Write a C program to generate electricity bill.
- iii) Find the roots of the quadratic equation.
- iv) Write a C program to simulate a calculator using switch case.
- v) Write a C program to find the given year is a leap year or not.

	WEEK 6
	Objective: Explore the full scope of iterative constructs namely while loop, do-while loop and
	for loop in addition to structured jump constructs like break and continue including when each
	of these statements is more appropriate to use.
	Suggested Experiments/Activities:
6	Tutorial 6: Loops, while and for loops
	Lab 6: Iterative problems e.g., the sum of series
	i) Find the factorial of given number using any loop.
	ii) Find the given number is a prime or not.
	iii) Compute sine and cos series
	iv) Checking a number palindrome
	v) Construct a pyramid of numbers.
	WEEK 7:
	Objective: Explore the full scope of Arrays construct namely defining and initializing 1-D and
	2-D and more generically n-D arrays and referencing individual array elements from the de-
	fined array. Using integer 1-D arrays, explore search solution linear search.
	Suggested Experiments/Activities:
7	Tutorial 7: 1 D Arrays: searching.
	Lab 7:1D Array manipulation, linear search
	i) Find the min and max of a 1-D integer array.
	ii) Perform linear search on 1D array.
	iii) The reverse of a 1D integer array
	iv)Find 2's complement of the given binary number.
	v) Eliminate duplicate elements in an array
	WEEK 8: ENGINEERING LULLEGE
	Objective: Explore the difference between other arrays and character arrays that can be used as
	Strings by using null character and get comfortable with string by doing experiments that will
	reverse a string and concatenate two strings. Explore sorting solution bubble sort using integer
	arrays. Suggested Exmaniments/Activities, Tutorial 8, 2 Demoys, sorting and Strings
8	Suggested Experiments/Activities: Tutorial 8: 2 D arrays, sorting and Strings. Lab 8: Matrix problems, String operations, Bubble sort
	i) Addition of two matrices
	ii) Multiplication two matrices
	iii) Sort array elements using bubble sort
	iv) Concatenate two strings without built-in functions
	v) Reverse a string using built-in and without built-in string functions
	v) Reverse a suring using built-in and without built-in string functions

WEEK 9:

9

Objective: Explore pointers to manage a dynamic array of integers, including memory allocation & value initialization, resizing changing and reordering the contents of an array and memory de-allocation using malloc (), calloc (), realloc () and free () functions. Gain experience processing command-line arguments received by C

Suggested Experiments/Activities:

Tutorial 9: Pointers, structures and dynamic memory allocation

Lab 9: Pointers and structures, memory dereferences.

- i) Write a C program to find the sum of a 1D array using malloc()
- ii) Write a C program to find the total, average of n students using structures
- iii) Enter n students data using calloc() and display failed students list
- iv) Read student name and marks from the command line and display the student details along with the total.
- v) Write a C program to implement realloc()

WEEK 10:

Objective: Experiment with C Structures, Unions, bit fields and self-referential structures (Singly linked lists) and nested structures

Suggested Experiments/Activities:

Tutorial 10: Bitfields, Self-Referential Structures, Linked lists

Lab10 : Bitfields, linked lists Read and print a date using dd/mm/yyyy format using bit-fields and differentiate the same without using bit- fields

- i) Create and display a singly linked list using self-referential structure.
- ii) Demonstrate the differences between structures and unions using a C program.
- iii) Write a C program to shift/rotate using bitfields.
- iv) Write a C program to copy one structure variable to another structure of the same type.

WEEK 11:

Objective: Explore the Functions, sub-routines, scope and extent of variables, doing some experiments by parameter passing using call by value. Basic methods of numerical integration

Suggested Experiments/Activities:

Tutorial 11: Functions, call by value, scope and extent,

Lab 11: Simple functions using call by value, solving differential equations using Eulers theorem.

- i) Write a C function to calculate NCR value.
- ii) Write a C function to find the length of a string.
- iii) Write a C function to transpose of a matrix.
- iv) Write a C function to demonstrate numerical integration of differential equations using Euler's method

11

10

	TYPENT 44
	WEEK 12:
	Objective: Explore how recursive solutions can be programmed by writing recursive functions
	that can be invoked from the main by programming at-least five distinct problems that have
	naturally recursive solutions.
	Suggested Experiments/Activities:
12	Tutorial 12: Recursion, the structure of recursive calls
	Lab 12: Recursive functions
	i) Write a recursive function to generate Fibonacci series.
	ii) Write a recursive function to find the lcm of two numbers.
	iii) Write a recursive function to find the factorial of a number.
	iv) Write a C Program to implement Ackermann function using recursion.
	v) Write a recursive function to find the sum of series.
	WEEK 13:
	Objective: Explore the basic difference between normal and pointer variables, Arithmetic oper-
	ations using pointers and passing variables to functions using pointers
	Suggested Experiments/Activities:
	Tutorial 13: Call by reference, dangling pointers
13	Lab 13: Simple functions using Call by reference, Dangling pointers.
	i) Write a C program to swap two numbers using call by reference.
	ii) Demonstrate Dangling pointer problem using a C program.
	iii) Write a C program to copy one string into another using pointer.
	iv)Write a C program to find no of lowercase, uppercase, digits and other characters using
	pointers.
	WEEK14:
	Objective: To understand data files and file handling with various file I/O functions. Explore
	the differences between text and binary files.
	Suggested Experiments/Activities:
	Tutorial 14: File handling
14	Lab 14: File operations
	i) Write a C program to write and read text into a file.
	ii) Write a C program to write and read text into a binary file using fread() and fwrite()
	iii) Copy the contents of one file to another file.
	iv) Write a C program to merge two files into the third file using command-line arguments.
	v) Find no. of lines, words and characters in a file
	vi) Write a C program to print last n characters of a given file.

NSS/NCC/SCOUTS & GUIDES/COMMUNITY SERVICE

(Common to AIDS, AIML, CE, CSBS, CSG, CIC, ME)

Course Objectives:

To impart discipline, character, fraternity, teamwork, social consciousness among the students and engaging them in selfless service.

Course Outcomes: At the end of the course students will be able to

S.No	Outcome	Knowledge Level
1.	Understand the importance of discipline, character and service motto.	K2
2.	Solve some societal issues by applying acquired knowledge, facts, and techniques.	К3
3.	Explore human relationships by analyzing social problems.	K4
4.	Determine to extend their help for the fellow beings and downtrodden people.	К3
5.	Develop leadership skills and civic responsibilities.	К3

SYLLABUS

UNIT-I Orientation

General Orientation on NSS/NCC/ Scouts & Guides/Community Service activities, career guidance.

Activities:

- i) Conducting –ice breaking sessions-expectations from the course-knowing personal talents and skills
- ii) Conducting orientations programs for the students –future plans-activities-releasing road map etc.
- iii) Displaying success stories-motivational biopics- award winning movies on societal issues etc.
- iv) Conducting talent show in singing patriotic songs-paintings- any other contribution.

UNIT-II Nature & Care

Activities:

- i) Best out of waste competition.
- ii) Poster and signs making competition to spread environmental awareness.
